

**Do we have to adapt safety procedures for personnel in remote HBOT facilities?**

The work presented is based mainly on the experiences gathered at the Hyperbaric Medical Center in Sharm el-Sheikh, Sinai, Egypt since 1993. Categorizing the tenders is done first, then the types of injuries are reviewed discussing various mechanisms. The factors contributing to dysbaric injuries are discussed. The prevention and safety procedures are listed with the introduction of a proposed skeleton for a questionnaire/checklist to be filled out by personnel inside hyperbaric treatment chambers and caissons prior to chamber diving
